

AGIP GREASE NG 3

AGIP GREASE NG 3 is a dark-grey, smooth-textured, calcium-base graphite grease.

CHARACTERISTICS (TYPICAL FIGURES)

AGIP GREASE NG 3

NLGI consistency		3
Base oil viscosity at 40°C	mm ² /s	65
Worked penetration	dmm	235
ASTM dropping point	°C	95

PROPERTIES AND PERFORMANCE

AGIP GREASE NG 3 forms a tenacious film with good lubricating and protective characteristics on metal surfaces. The presence of graphite ensures good antiwear properties and guarantees continuous lubrication even in working conditions where the lubricating power of a normal grease would be inadequate.

APPLICATIONS

AGIP GREASE NG 3 is suitable for the lubrication of open gears, power transmission chains and large, slow-moving, heavily-loaded machine parts in general, especially when operating in dust-laden conditions.
